Materials Science

petroleum/crude oil

ancient living organisms

DISTILLATION

components of oil are used to make materials like fabrics and plastics

Petrochemical Industry

this is a biological product

nature uses enzymes

there are a finite number of enzymes

identifying a series of enzymes that will carry out some transformation is an extremely difficult task

alcohol fermentation is a form of anaerobic respiration

all this chemistry requires enzymes

we can get nature to make the stuff we want instead

we can use enzymes to piece together synthetic strategies

we simply use enzymes instead of typical laboratory reagents

How do we get these?

enzymes are proteins

our understanding of metabolism and catalog of enzymes is growing

oil is not needed as a starting material

put the microorganism in a vat with food and the whole process occurs on its own
this is how we get plastics from agricultural waste

It Is Estimated that We Are Losing Species 1 , 000 to 10 , 000 Times the Background Rate Which Is One to Five Species per Year these Slides That I Showed Shows Only a Few of these Species That Are Close to Extinction or Extinct and this Is Only a Small Fraction of the Species That We Are Aware of There Are

Many More Species both Small and Big That Will Loss Forever without Us Even Knowing that They Ever Existed So There Are Several Questions That I Will Post at the End of My Talk Can We Reverse this Process Can We Prevent Slow Down the Strong or Remedy Nature while Continuing To Increasingly Explore Its Resources
