Sports Recreational Activities

There are more opportunities than ever for employment in recreational sport, which means the need to prepare students with a solid foundation of the design, delivery, and management of recreational sport has never been more critical. Recreational Sport is designed precisely with that need in mind. This text provides a contemporary perspective of recreational sport management, offering a comprehensive picture of recreational sport management for people in or entering all sectors of recreation and leisure, including public, nonprofit, private, and commercial. “We saw a need for broad-based recreational sport programming that reflects the myriad of recreational sport activities and opportunities that are out there,” says lead author Robert Barcelona. “To meet those increased needs and interests, people need to have an array of programming and management skills in recreational sport.” Barcelona and his coauthors help readers gain those skills in part by simplifying the complicated process of designing and delivering programs in various settings in recreation and leisure services. They present a macrocosm view of recreational sport in communities—a view that reflects the most current, application-based research in the field. Their text places recreational sport squarely in the middle of the recreation and leisure curriculum and is supported by the recreational sport core competencies as developed by Barcelona himself. Those competencies are based on what recreational sport managers need to know and be able to do to grow and succeed in the profession, and they connect with the NIRSA recreational sport competencies developed in 2013. In addition, Recreational Sport offers the following:

- Coverage for all age groups and sectors in a range of settings and contexts for recreational sport
- International perspectives to offer students great insights into career opportunities
- The latest theory, research, and real-world approaches to help both students and professionals who program sports
- Case studies of real-world issues in recreational sport and examples of theory-to-practice applications

The text comes with an array of online ancillaries that will prove invaluable to both instructors and students. The instructor guide supports and extends the chapter content and offers numerous ideas for learning activities, projects, and topics for papers. It also supplies chapter summaries, glossary terms, and links to websites that contain information for both instructors and students. The test package has multiple-choice, true-or-false, matching, and short-answer questions that can interface with learning management systems, and the presentation package offers a visual overview of the material to help students retain the concepts. “In teaching recreational sport for many years, I know that students first need to grasp the big picture of recreational sports,” Barcelona says. “We deliver that big picture in addition to information on design, delivery, and management that every student needs to know to succeed, regardless of what recreational sport organization he or she is a part of.” That big-picture element, along with the cutting-edge information on program design, delivery, and management, sets this book apart. In the three parts of the book, students will be able to do the following:

- Be grounded in the philosophical concepts that define the field
- Learn about the core competencies they need to know to deliver successful programs and events
- Gain insights about the settings and contexts where recreational sport happens and learn about key ideas, issues, and career

opportunities in the field Recreational Sport is a textbook critical to students' future success in recreational sport management, offering the big-picture view of the field while offering practical guidance in and real-world examples of successful design, delivery, and management of recreational sport programming.

What attracts students to a college--academics? recreational sports? the campus recreation center? If you selected all three answers, you are right. Most students choose a college or university for its academic merits, but another key factor in their decision is the recreational sports programs and facilities. Recreational sports are an important component to students' quality of life on campus and to a college's recruitment and retention of students. The National Intramural-Recreational Sports Association contracted Kerr-Downs Research Associates to conduct a nationwide research project to determine the value of recreational sport on college campuses. More than 2,600 students from 16 colleges participated in this study, making it the largest representative group of college students from multiple colleges ever studied with respect to the value of participation in recreational sports. This study examined the value and contributions of recreational sports to participants' lives and documented the buying power of participants in recreational sports. The first of its kind in research, *The Value of Recreational Sports in Higher Education* makes a strong case for campus recreational sports programs and facilities that will support the mission of your college into the future.

Green space has become a major issue in European cities in recent years as a result of enhanced environmental awareness, urban marketing, planning policy and growing population densities. Up to now, however, the subject of sports areas and grounds has attracted little research, despite the fact that since the First World War such public and private areas – from football pitches and running tracks to golf courses and tennis courts – have often comprised one of the most important and extensive types of green space in the European city. This book presents a pioneering comparative and multidisciplinary analysis of the development, use and impact of sports areas in the European city from the start of the 20th century up to the present time. Employing a range of historical, spatial and ecological approaches it examines when and why sports areas evolved, the contribution of municipalities and the private sector, the role of gender and class, and the impact on the urban landscape and ecology. Chapters cover urban sports areas in Finland, Britain, the Netherlands, Germany and Italy, illustrating the contrasts in the provision of green space across Europe.

'Amusements they must have, or life would hardly be worth living...' Newcastle Weekly Chronicle, 1895
This text explores life in the mining villages of the north-east of England in the nineteenth and early twentieth centuries - a time of massive social and industrial change. The sporting lives of these communities are often marginalized by historians, but this thoroughly researched account reveals how play as well as work were central to the lives of the working classes. Miners contributed significantly to the economic success of the north-east during this time, yet living conditions in the mining villages were 'horrendous'. Sport and recreation were essential to bring meaning and pleasure to mining families, and were fundamental to the complex social relationships within and between communities. Features of this extensive text include: * analysis of the physical, social and economic structures that determined the leisure lives of the mining villages * the role of 'traditional' and 'new' sports * comparisons with other British regions.

The second edition of this ground-breaking text continues to guide students toward a greater understanding of human resource management in the sport and recreation environment. Human Resource Management in Sport and Recreation, Second Edition, provides future practitioners with a solid foundation in research and application of human resource management for success in the sport industry. With more than 30 years of experience in management of human resources, Dr. Packianathan Chelladurai provides an understanding of the dynamics of human resources and management, bringing into focus the three divergent groups of people who constitute human resources in sport and recreation organizations: paid professional workers, volunteers,

and the clients themselves. Dr. Chelladurai goes on to match managerial processes with individual differences among those three groups. *Human Resource Management in Sport and Recreation, Second Edition*, merges the fields of human resource management and the sport industry in an easy-to-read manner. Its updated references, examples, and studies reflect the increased growth, interest, and complexity in human resource management in sport in recent years. This new edition places a greater emphasis on managerial competencies, the strategic importance of human resource management, and the implications of organizational justice. There is also a new chapter on internal marketing, a concept that has not been addressed adequately in a sport context but deserves attention as sport and recreation organizations better understand the importance of human resource management. This new chapter details the potential impact of internal marketing and outlines its uses. Student comprehension is aided by several special elements, including "Viewpoint" sidebars providing quotes and findings from experts and researchers, "Review" sidebars highlighting key points, and practical sidebars detailing applications of research or problems that practitioners must be aware of. The book also includes learning objectives, summaries, key terms, and end-of-chapter activities. Part I outlines the unique and common characteristics of the three groups in human resources. Part II focuses on differences among people and how the differences affect behavior in sport and recreation organizations. This part covers human resource issues related to abilities, personality, values, and motivation among the three sets. Part III explores significant organizational processes in the management of human resources. Included are chapters on organizational justice, job design, staffing and career considerations, leadership, performance appraisal, reward systems, and internal marketing. Finally, part IV discusses two significant outcomes expected of human resource practices: satisfaction and commitment. *Human Resource Management in Sport and Recreation, Second Edition*, will guide students' understanding of key concepts in human resources in the sport and recreation industry. In doing so, it will prepare them for a career in that industry.

"Leisure is everywhere, but its impact on people's lives is often overlooked. Leisure is more than "doing nothing" or "hanging out." It has implications for society, affecting economics, politics, business, health, and the environment. On an individual level, it offers multiple opportunities for personal growth and development. And it contributes to a better quality of life for individuals and communities as a whole. With *Dimensions of Leisure for Life: Individuals and Society*, students will learn to understand and appreciate leisure and explore the ways that their leisure choices can help them lead happier, more balanced lives both now and in the future. ... With contributions from 22 leading professors, the book examines the following: the concept of leisure, including the various ways in which it has been defined and described, the benefits associated with it, the scope of the leisure industry field, and the basis for studying leisure as a social science; the impact of leisure on quality of life, health, physical activity and stress levels, and overall happiness and well-being; the social significance of leisure, including the interaction of leisure with history, contemporary society, technology, the environment, economics, and politics and public policy; the factors that influence each individual's leisure choices and level of involvement in leisure activities, such as awareness of local options, barriers of age, gender, sexual orientation, race, ethnicity, religion, or socioeconomic status, geographic distribution of leisure spaces; and maturity level and stage of development." --Publisher.

Sport, Leisure and Ergonomics

First published in 1994, *Winners and Losers* is based upon a two-year study carried out in Manchester. Using a wealth of research material gathered from 1000 respondents from seven ethnic minority groups, it details the social, cultural, and religious priorities of these groups, and through this, their involvement with sport and physical recreation. A major theme of the book is that all those involved in the promotion of sport and recreation facilities in whatever context should recognise that ethnic minority groups are different, and their differences need to be understood, respected and accepted. It is important for the providers and the ethnic minority groups to learn about each other and understand the motives which underlie each other's responses and recognise the limitations which define the boundaries of the possible for both sides. This book is a must

read for scholars and researchers of education, and multiculturalism.
