The line began forming after eight o'clock. Sal, short and heavy-set, kept everyone busy. Neat, in a white shirt and sports jacket, with his grey fedora cocked to the side, his crooked grin made you smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy, exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a \"Balls for the Queen\" or a \"Singing beer.\" The price was always right for a good time and Warm Beer and Lousy Food was the place to be.

When improvising, what your mind hears is more often than not determined by what your body can reproduce on your instrument. Much of your conception as an improviser is determined by your technique. If you can't play certain types of ideas, you are simply not going to conceive of them while you are improvising. Even if you could, it wouldn't matter, since you couldn't play them anyway. This book presents serious chops-building technical studies for single note lines and chords. Plus, the examples feature a lot of harmonic content. The material is written in standard notation.

The impact of mass media on individuals and society is to a great extent based on human emotions. Emotions, in turn, are essential in understanding how media messages are processed as well as media's impact on individual and social behavior and public social life. Adopting an interdisciplinary approach to the study of emotions within a mass media context, the Handbook of Emotions and Mass Media addresses areas such as evolutionary psychology, media entertainment, sociology, cultural studies, media psychology, political communication, persuasion, and new technology. Leading experts from across the globe explore cutting-edge research on issues including the evolutionary functions of mediated emotions, emotions and media entertainment, measurements of emotions within the context of mass media, media violence, fear-evoking media, politics and public emotions, features, forms and functions of emotions beyond the message, and provide the reader a glimpse into future generations of media technology. This compelling and authoritative Handbook is an essential reference tool for scholars and students of media, communication studies, media psychology, emotions, cultural studies, sociology, and other related disciplines.

"Over the next few decades, immersive media could fundamentally change the ways humans engage in entertainment, communication, and social interaction. The current volume takes a step towards understanding this potential paradigm shift, combining insights from pioneers of the field of 'presence' with bright young scholars who bring a new perspective." —Jeremy Bailenson, Stanford University, USA "This book provides an indispensable contribution to scholars in communication studies, computer science and psychology interested in the modes of being present in different media, and offers a careful historical and theoretical framework to the state-of-the-art research."—Anna Spagnolli, University of Padova, Italy "Bracken and Skalski have assembled a collection of works from the world's foremost authorities on telepresence, a topic that has gone understudied for years. Someone has finally assembled a comprehensive volume on the subject. This book is a must not only for those interested in telepresence, but for mass communication scholars of all kinds."—Kenneth A. Lachan, University of Massachusetts, Boston, USA *Immersed in Media* highlights the increasing significance of telepresence in the media field. With contributions representing diverse disciplines, this volume delves into the topic through considerations of popular media types and their effects on users. Chapters in the work explain how the experience of presence can be affected by media technologies, including television, video games, film, and the Internet. They also discuss how presence experience mediates or moderates commonly studied media effects, such as enjoyment, persuasion, and aggression. These discussions are accompanied by overviews of the current state of presence research and its future. Ultimately, this work establishes the crucial role of telepresence in gaining a complete understanding of the uses and effects of popular media technologies.

Immersed in Media

Using both established as well as more recent modes of inquiry, this book sheds new light on an increasingly important dimension of organizational cooperation and competition - that of knowledge and knowledge transfer. Based on research and practice, the book addresses a wide range of issues concerning the management of knowledge, from knowledge transfer between organizations to knowledge management within organizations. Divided into two parts, *Managing Knowledge* reflects a fundamental conceptual distinction between two world-views. The first part is characterized by representationism, or traditional approaches to viewing knowledge, knowledge transfer and cooperative strategies. The contributors provide a clear overview of the current research on knowledge management, and bring together studies on the sociology of knowledge, strategic management and learning theory. The second part focuses on anti-representationism, or new perspectives on knowledge and knowledge transfer in organizational cooperation. These perspectives, based on autopoiesis theory, go far beyond conventional ways of perceiving and managing knowledge and their implications for management theory and practice are fully examined.

This book discusses the beneficial and harmful effects of insects and explains their development and significance for biodiversity. Threatening pests or threatened beneficials? Biting midges are wonderful insects. The animals are so tiny and uniquely shaped that they are particularly good at pollinating the small and tight flowers of the cocoa tree. Without them, there would be much less chocolate. We associate other insects more with the damage that they cause. Mosquitoes and wasps bite us. Moth larvae damage textiles and contaminate foods. Ants undermine our paths and flies are just a pain. But what exactly is our relationship with insects? Are they more beneficial or harmful? What role do they play in the world? What are the effects of climate change: Will the number of insects continue to increase?
